The Sudan Manual for Medical Emergencies

First Edition 2022

Edited by:

Hasan abuaisha/ Elwaleed Ali Elhassan

The Sudan Manual for Medical Emergencies is a compact and wide-ranging handbook that is meant for practicing and student physicians handling acute and critical medical and psychiatric patients. A group of experts contributed to the Manual by putting together updated international guidelines as well as standard of care practices. It also includes comprehensive and illustrative diagrams in addition to an index of included drugs to aid with quick reference. Attempts have been made at providing different patient lifesaving approaches whenever optimal ways are unavailable.
